

CEPSA PANAMA 10 YEARS OF ACTIVITY

In our tenth year of operations, Cepsa Panamá has managed to consolidate our leadership position on the Panamanian market through sales at the ports of Balboa and Cristobal. This constitutes a magnificent success thanks to joint efforts to represent what is today one of the most important suppliers on the Panamanian market after ten years of activity in this area.

Always thinking of improvement and safety of our services, Cepsa Panamá currently supplies with several barges, two of them exclusively at our service, which gives us a lot of flexibility. This capacity will shortly be increased in the course of our short- and medium-term expansion plans in line with the market's growth.

Cepsa Panamá offers a wide range of marine fuels, mostly supplied by barge and also by lorry and pipeline, following the strictest quality assurance standards and meticulously complying with current regulations. Special emphasis is currently being placed on pumping capacity and blending operations, at which Cepsa Panamá boasts great records.

Cepsa Panamá maintains that the success of our enlargement, expansion and continuous improvement activities would not be possible without total preference for our main priority, none other than the quality of our products and services. Cepsa Panamá in accordance with this policy guarantees the quality of our products pursuant to ISO 8217:2005 standards, but also the quality of our people and management.

Moreover, we boost the great flexibility of being able to supply always either side of the Canal, offering once more the best service possible to our customers.

At Cepsa Panamá, we are working every day to achieve the highest possible levels of operation and service quality in order to be able to provide our clients with the most suitable solution for their requirements. Safety, quality, versatility and responsibility are the cornerstones of our commitment.
