

CEPSA ACROSS THE OIL VALUE CHAIN

1. EXPLORATION AND PRODUCTION

Search, discovery, and extraction of oil and natural gas, both onshore and offshore.

2. TRANSPORTATION

Transportation of oil and gas through tankers or pipelines to their destinations.

3. REFINING

This work, also called distillation, is carried out at refineries, where crude oil is turned into products and also raw materials for other industries.

4. CHEMICALS

Chemicals plants make derivatives that are used as the raw materials needed to produce plastics, biodegradable detergents, paints, synthetic fibers, and more.

5. ELECTRICITY

Cogeneration plants produce electricity and steam and are used at our plants, with any excess sold on the power market.

6. DISTRIBUTION AND MARKETING

There are many petroleum derivatives. The most common are heating fuels, marine fuels, jet fuel, butane, propane, lubricants and asphalts. They are distributed and sold through various points of sales to reach every type of consumer.
