

Cepsa welcomes half a thousand Campo de Gibraltar residents to its Open Days

- **The open days, which have been ongoing since 2006, are a result of the Company's commitment to the environment and its transparency**
- **The attendees were able to witness the facilities at San Roque Energy Park first-hand, as well as the Energy Park's commitment to safety, the environment, and technical excellence**

A total of 534 people have taken part in the 13th edition of Cepsa's Open Days in San Roque. For six days, the energy company has shown society its facilities and the activities carried out in Campo de Gibraltar. The visits involve reviewing the multiple applications for oil in our daily lives, as well as the high environmental, safety, energy efficiency, and innovation standards that Cepsa upholds at its facilities. In addition, this year the Cepsa 2030 *Positive Motion* strategic plan for becoming leaders in the energy transition was addressed.

The attendees, mainly from Campo de Gibraltar, but also from places such as Madrid, Palos de la Frontera, and Malaga, among others, got to know the industrial processes in person, as well as the Madre Vieja Environmental Station, accompanied by Cepsa employees.

Finally, all citizens were given a survey, since Cepsa is always trying to improve and learn about the concerns of the residents of Campo de Gibraltar. Safety and the company's environmental and sustainability actions were two of the main points addressed during the Open Days, which ended last Saturday.

The Open Days, which have been ongoing since 2006 and in which over 5,500 people have taken part so far, are a testament to Cepsa's sense of commitment to and transparency regarding the environment. The Open Days are in addition to other institutional, educational, associational, and technical visit programs the Company carries out in order to show its technical excellence to the outside world and promote closer ties with the community.

Cepsa is a leading international company committed to sustainable mobility and energy with a solid technical experience after more than 90 years of activity. The company also has a world-leading chemicals business with increasingly sustainable operations.

In 2022, Cepsa presented its new strategic plan for 2030, *Positive Motion*, which projects its ambition to be a leader in sustainable mobility, biofuels, and green hydrogen in Spain and Portugal, and to become a benchmark in the

NOT

energy transition. The company places customers at the heart of its business and will work with them to help them advance their decarbonization objectives.

ESG criteria inspire everything Cepsa does as it advances toward its Net Positive objective. This decade, it will reduce its Scope 1 and 2 CO₂ emissions by 55% and its Scope 3 emissions by 15 to 20%, with the objective of reaching net zero emissions by 2050.
